SUMMARY

AI Engineer with an **M.S. in Data Science** specializing in NLP, LLM fine-tuning, and production ML pipelines. Experienced in **building end-to-end** ML systems including data processing, model training, evaluation, deployment using PyTorch, Hugging face, and AWS. Seeking **ML Engineer or AI Engineer roles**.

EDUCATION

Master of Computer Science (Data Science), GPA: 3.7
Illinois Institute of Technology, Illinois, USA **Sep 2023 - Dec 2025**

Bachelor of Technology (Software Engineering)
McMaster University, Ontario, Canada **Dec 2020**

TECHNICAL SKILLS

- **Languages**: Python, SQL, TypeScript, JavaScript, Angular 17, React.
- **ML/AI:** PyTorch, TensorFlow, scikit-learn, Hugging Face Transformers, Cross Validation, Pyodide.
- **Techniques:** Deep Learning, NLP, LLM Fine-tuning, RAG, Feature Engineering, Hyperparameter Tuning.
- **ML Systems:** Docker, AWS, MLflow, Airflow, FastAPI.

ACADEMIC PROJECTS

House Price Prediction **Dec 2025**

- Implemented end-to-end ML pipeline using **Scikit-learn pipelines**.
- Improved baseline model accuracy by **12% (R^2 = 0.88)** via.
- Deployed the model using **Flask REST API with Docker containerization** for real time inference.

Sentiment Analysis

- Achieved **92% accuracy and 0.89 F1 score** on benchmark dataset.
- Finetuned **DistilBERT** using Hugging Face Transformers on **50k labeled samples**.
- Implemented modular training inference pipeline enabling rapid model experimentation.

PERSONAL PROJECTS

Interactive Sentiment Analysis System **Feb 2026**

- Implemented sentiment analysis platform, delivering **real time inference (<50ms)**.
- Built **token level sentiment visualization** enabling side by side comparison of models.
- Deployed a **production ready ML pipeline**, exposing a scalable REST API and integrating seamlessly into a GitHub Pages frontend with 95%+ availability.

RAG System **Mar 2026 - Present**

- Building **RAG pipeline** (sentence transformers + FAISS) to improve answer relevance**.**
- Productionize **LLM orchestration** with CI/CD.
- Building a lightweight version which is browser friendly and a local version which mimics real system.

ENGINEERING

Frontend Engineer **Jan 2021 – Jan 2026**

- Developed app with Angular standalone components to **cut bundle size by 10%** for thousands of users.
- Designed a reusable component system with TypeScript, **reducing UI build time by 30%.**
- **Tech**: Angular 17, TypeScript, RxJS, NgRx, Karma
